exclusive planters for professionals 2009/2010

livinggreen design

Our planters represent the best in UK design and manufacture. Although reflecting influences from Europe, Asia and the Americas we are proud to be innovators, developing ideas and themes and bringing them to life at our factories throughout Britain. Each planter is genuinely handcrafted and with literally hundreds of colours and finishes possible, our customers get bespoke products, made individually for their unique requirements.

In a world of mass produced identikit plastics, it's reassuring to know that through the use of our unique Advanced Composite (AC) formulation, we can manufacture striking designs of outstanding quality without compromise to availability or price. Indeed many of our Spirit ranges are less expensive than injection moulded equivalents and all are better value. The secret? Simply taking fibreglass as a base and adding modern materials and manufacturing techniques to create AC planters that are the perfect solution to every situation. Just look at these advantages:

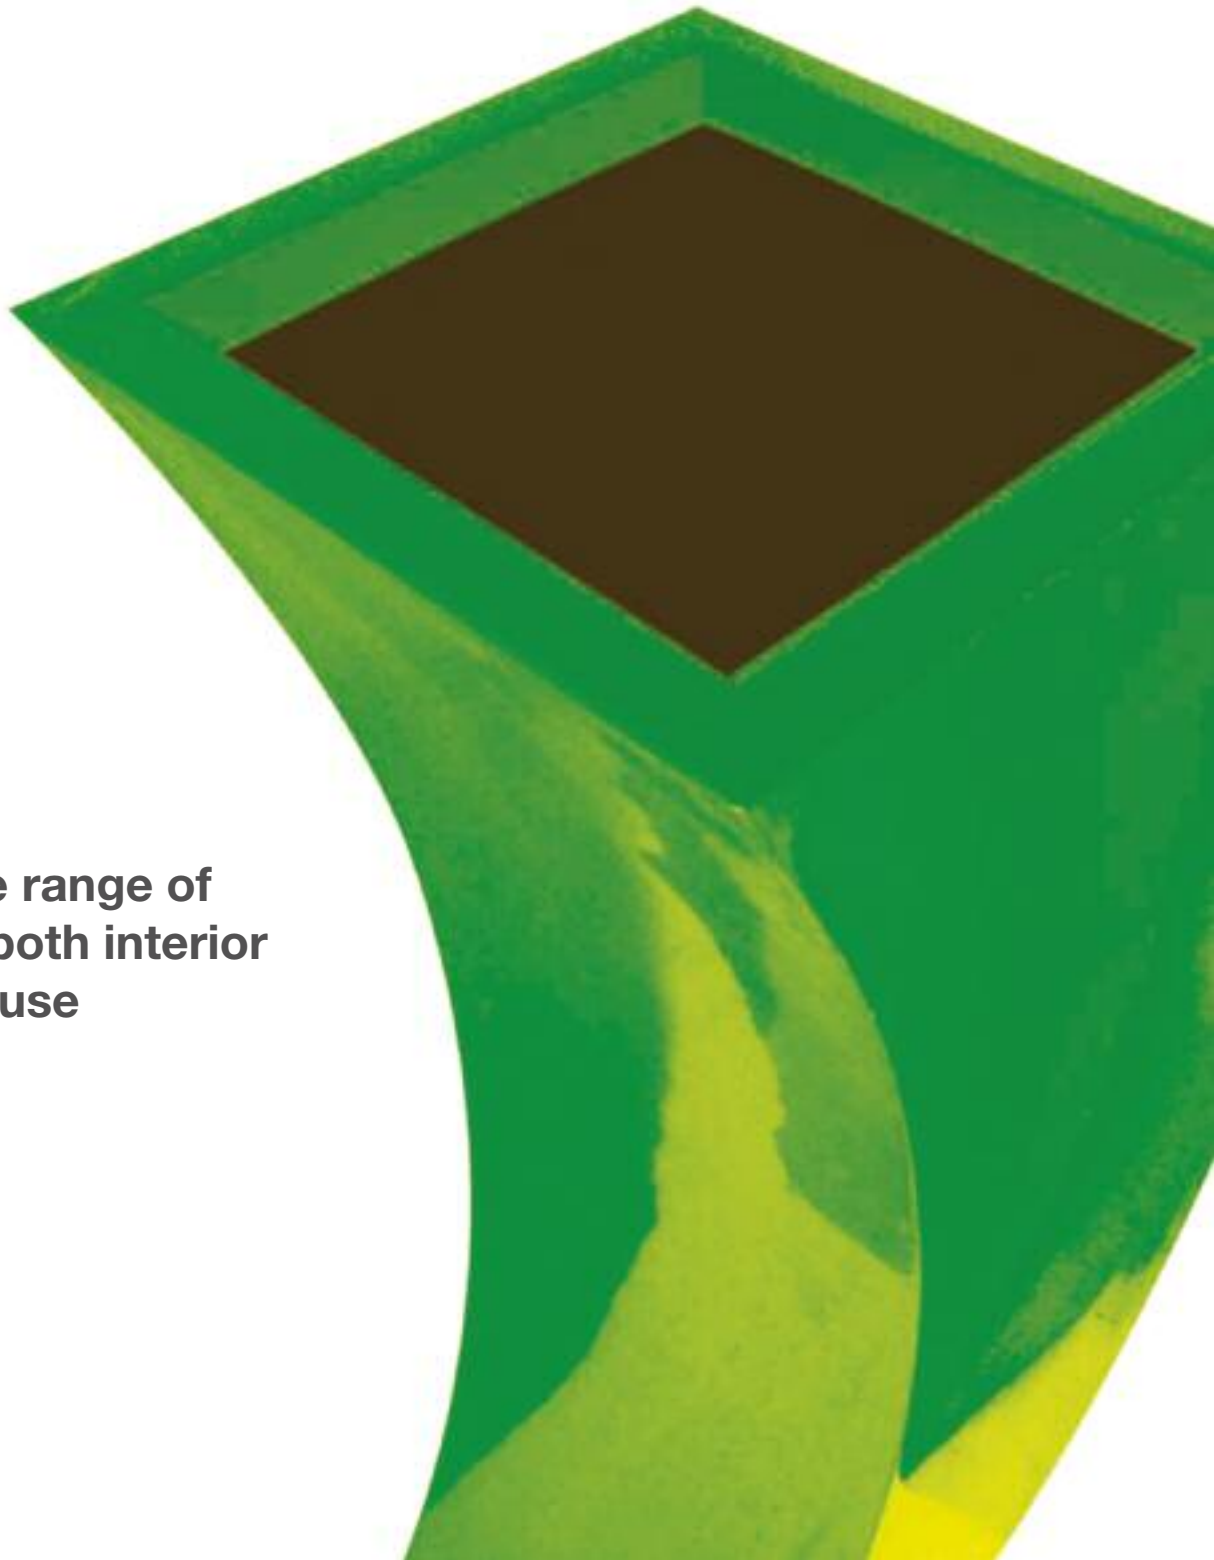

- **All planters are suitable for both interior and exterior use**
- **Outstanding environmental credentials (see page 6)**
- **Ultra lightweight but stronger than steel**
- **Fully frostproof and UV stable**
- **Completely watertight but can be easily drilled for exterior use**
- **Every RAL and BS colour available in textured, polished and matt finishes**
- **Unique range of special 'Natural' finishes – metal, stone, terracotta, rust and ceramic finishes that look, feel and weather just like the real thing**
- **Can be specified as Class 0/Class 1 fire retardant**
- **Design your own! – AC is ideal for bespoke project work with any size or shaped planter possible (see page 142)**
- **Tree planters designs available off the shelf up to 2m square**

Where metal is essential we offer a complete design and fabrication service in galvanised steel, aluminium and stainless steel, with the option of powder coating in any RAL or BS colour (see page 148).

With water conservation ever more important we have spent the past 25 years developing and refining our own solution for planters, beds and fine turf, which has been independently tested and verified by Reading University's Horticultural Technology Unit. The result, tanker can cut water usage by a minimum of 35% and much more outdoors, while prolonging the period required between watering by 100%. Easy to fit and use Tanker is a natural choice for any new planting and is specified in the catalogue for each of our planters.

**An incredible range of
planters for both interior
and exterior use**

livinggreen design

Nos contenants constituent ce qui se fait de mieux en matière de conception et de fabrication entièrement britannique. Ils sont inspirés par de nombreuses influences tant européennes, asiatiques et américaines. Chaque contenant est véritablement fait à la main et peut être décliné en une multitude de couleurs et finitions possibles. Nos clients obtiennent ainsi un produit fait sur mesure parfaitement adapté à leurs projets.

Dans un monde dominé par l'usage des matières plastiques nous nous démarquons avec notre formule de AC – les composites avancés. Elle nous permet de concevoir des produits remarquables, de qualité exceptionnelle sans concession en termes de prix et de disponibilité. Nos contenants AC offre ainsi des solutions d'usages multiples et présentent de nombreux avantages:

- **Tous les bacs conviennent pour l'usage à l'intérieur à l'extérieur**
- **Ils présentent des qualités environnementales exceptionnelles (voir la page 7)**
- **Ils sont ultralégers mais plus robustes que l'acier**
- **Entièrement résistant au gel, aux UV et aux intempéries**
- **Complètement étanche mais pouvant être percés pour un usage à l'extérieur**
- **Chaque couleur RAL et BS disponibles dans des finitions texturées, polie et matte**
- **La gamme unique de finitions réalistes 'Naturel' – le métal, la pierre, la terre cuite, la rouille, les finitions qui ressemblent à la vraie matière**
- **Peut-être classé en incombustible MO et non-inflammable M1**
- **Concevez le votre! – le AC est idéal pour les projets sur mesure décliné en taille, en forme et en finition (voir la page 142)**
- **Les bacs à arbres de grandes tailles sont disponibles en stock jusqu'à 2 mètres**

Là où le métal est indispensable nous offrons un service complet de conception et fabrication en acier galvanisé, aluminium et inox, avec l'option d'une finition en peinture avec n'importe quelle couleur RAL ou BS (voir la page 148).

Avec la nécessité croissante d'économiser l'eau, nous avons développé depuis 25 ans une solution pour les bacs, jardins et gazon, validée par l'unité horticole de l'université de Reading en Angleterre. La réserve d'eau, 'Tanker', permet d'économiser au moins 35% de l'eau d'arrosage voire plus en extérieur, tout en nécessitant deux fois moins d'arrosage. D'une adaptation et d'un usage facile, la réserve d'eau est un choix naturel pour les nouvelles plantations et nous la prescrivons dans notre catalogue pour chacun de nos pots.

livinggreen design

Onze potten hebben een “status aparte” wat betreft ontwerp en afwerking. Innovatief is de omschrijving die past bij onze potten. Een ontwikkeling van thema’s en ideeën met alle wereldse invloeden komt bij elkaar in de Bitse fabrieken. Met elke pot handgemaakt en in alle kleuren van de regenboog kunnen ook de niet standaard maten bijdragen tot een unieke pot voor U als klant.

In een wereld met steeds meer massa productie, is het goed om te weten dat het ook anders kan. Als U kiest voor onze glasvezelpotten kiest U voor een treffend design van uitzonderlijke kwaliteit, zonder compromis wat betreft beschikbaarheid en prijs. Inderdaad, veel van onze Spirit range potten zijn al goedkoper dan de plastic versies. Het geheim? Glasvezel als basis, met de moderne toevoegingen en productie methoden creëer je een pot die de beste oplossing is voor elke situatie. De voordelen:

- **Alle potten zijn geschikt voor binnen en buiten**
- **Milieu & ethisch vriendelijk geproduceerd (zie pagina 8)**
- **Ultra lichtgewicht en sterker als staal**
- **Vorstbestendig en UV straling bestand**
- **Volledig waterdicht, maar een gat in de bodem is zo gemaakt**
- **Alle RAL of BS kleuren beschikbaar in alle afwerkingen Gepolijst / Mat / Structuur**
- **Unieke range van afwerkingen die niet van echt zijn te onderscheiden Metaal/ Steen/ Terracotta/ Roest/ Keramiek**
- **Kunnen geclassificeerd worden met klasse 0/klasse 1 wat betreft vlamvertragende werking**
- **In alle maten en vormen, wat U wilt! (zie pagina 142)**
- **Grote maten tot 200cm vierkant worden zo gemaakt**

Als U toch metaal nodig heeft.

Wij kunnen u een compleet assortiment aanbieden; Gegalvaniseerd metaal, Roestvrij staal en Aluminium potten, met de optie om het in alle RAL kleuren te kunnen powdercoaten.

Met de waterproblematiek steeds actueler, hebben we gedurende de afgelopen 25 jaar onze watergeef systemen steeds verder ontwikkelt en verbeterd. Getest door de Universiteit van Reading kunnen onze watergeef systemen het watergebruik met tenminste 35% terug brengen.

De watergift periode wordt tenminste gehalveerd. Het systeem Tanker is eenvoudig, een natuurlijke keus voor al uw beplantingen. Bij alle potten wordt het bijkomende Tankersysteem gespecificeerd.

environment and ethics

In choosing Livinggreen Design planters you are making a sound environmental and ethical choice.

In comparison to other planter materials such as plastic, ceramics, metals and wood, AC offers many environmental advantages, not least because many of these products are manufactured in Asia and imported with the resulting larger Carbon Footprint and ethical uncertainty this brings.

Manufacturing

AC planters are based on fibreglass, a composite of plastic resins and glass fibres. Glass is of course made from silica, the most common mineral on Earth. Typically, an AC planter is only 2 - 3mm thick, with the plastic element only one third of this. Compare this to an injection moulded plastic product which needs to be double walled and you realise that AC planters contain at most a tenth of the plastic of these. AC planters are made by hand at room temperature using a chemical process and the only machinery required are hand tools for the finishing process. Compare this to plastics and metals where massive inputs of heat and machinery are required and you quickly see the energy inputs into AC planter production are miserly. Even ceramics require machinery to extract the clay and huge furnaces to power the kilns – so it's no surprise in Asia to find these placed nearby forests as a plentiful source of wood.

Ethical Production

Our AC planters are manufactured in the UK under European Health and Safety Legislation. Our craftsmen are necessarily well paid and subject to regular health checks. All waste is disposed of under environmental legislation. By contrast, most other planters sold in Europe to professional landscapers have been sourced in Vietnam, the Philippines, Malaysia, India and China. Can we be sure equivalent standards are in place?

Carbon Footprint

Made in the UK and ultra lightweight, AC planters travel far fewer miles and require less energy per mile than much heavier clay and metal imports. As detailed above, the energy used in production is also minimal.

Recycling

Firstly, all our AC planters can be returned to us for repair and refinishing to an as new condition. The only reason to ever throw one of these planters away is if the design has become so obsolete it is unusable. Should disposal be the only option then full recycling is now possible thanks to processes developed for the automotive industry. Glass fibres can be reclaimed chemically from the waste and reused in insulation products. Also the product can be ground down and is commercially used both as an element of new road construction and in industrial roofing products.

It's worth pointing out that much of the glass fibre matting used in production of AC planters is itself made from recycled glass!

environnement et éthique

En choisissant les contenants 'Livingreen Design' vous faites un choix environnemental et éthique. Contrairement à d'autres matériaux pouvant constituer un bac comme le plastique, la céramique, les métaux et le bois, généralement fabriqué en Asie, AC offre des avantages environnementaux: Les produits sont recyclables, durables, réparables, légers et fabriqués au Royaume-Uni, donc ils possèdent une empreinte de carbone réduite par rapport aux produits importés d'Asie.

Fabrication

Des bacs AC sont basés sur l'utilisation d'un composite de fibre de verre, obtenu à partir de la Silice, que l'on trouve abondamment sur terre. L'épaisseur d'un bac AC est généralement de 2 à 3 mm. Les bacs AC sont faits à la main à la température ambiante, les seules machines nécessaires sont des outils à main pour réaliser les finitions.

Production éthique

Nos contenants AC sont fabriqués au Royaume Uni dans le cadre de la législation européenne en termes de santé et de sécurité. Nos artisans sont correctement payés et sont régulièrement contrôlés par des inspections sanitaires. Les pertes et les chutes sont traitées selon la législation environnementale.

Empreinte de pas de carbone

Fabriqués au Royaume-Uni et ultralégers, les bacs AC voyagent moins et consomment moins d'énergie par KM que des pots importés fabriqués avec des matériaux plus lourds en céramique ou en métal.

Recyclage

Tous nos bacs AC peuvent être renvoyés afin d'être réparés, ils retrouvent alors leur aspect neuf. Au cas où la suppression d'un bac serait toutefois nécessaire, il est maintenant possible de le recycler entièrement. La fibre de verre broyée peut entrer dans la composition des structures de voiries, des éléments d'isolation ou de toiture préfabriquées. D'ailleurs, une part importante des plaques de fibres de verre utilisées dans la production des bacs AC est déjà elle-même fabriquée à partir de verre recyclé.

milieu

en ethiek

Met uw keuze voor Livinggreen Design potten, kiest U voor Milieu en Ethiek.

In vergelijking met bijv. plastic, keramiek, metaal en hout zijn onze glasvezel producten eco vriendelijker dan U denkt. Mede omdat veel van de bovengenoemde producten uit Azië komen en dus de transportafstand milieu belastend is en ook de arbeidsomstandigheden nogal eens vragen oproepen.

Productie proces

Glasvezel potten worden gemaakt op basis van een hars van plastic en vezels van glas. Glas wordt gemaakt van silica, het meest voorkomende mineraal op aarde. Een pot is slechts 2-3 mm dik, waarvan slechts 1/3 kunststof. Vergelijk dit eens met een plastic product (vaak dubbelwandig) en U begrijpt dat onze potten slechts 1/10 plastic gebruiken. De glasvezel potten worden handgemaakt op kamertemperatuur en met handgereedschappen. Als je dit vergelijkt met de machines en hitte behandeling die nodig zijn voor plastic en metaal potten, dan beseft je al gauw dat de energie input minimaal is voor een glasvezel pot. Ook keramiek, wat gebakken moet worden heeft een veel hogere input. Het is dan ook niet vreemd dat je deze keramiek fabrieken aan de rand van het oerwoud staan, vanwege de beschikbaarheid van (stook) hout.

Ethische aspecten

Onze glasvezel producten worden in het Verenigd Koninkrijk geproduceerd onder Europese regelgeving. Onze ambachtsslui worden wel fatsoenlijk betaald en worden regelmatig gekeurd.

Alle afval wordt volgens de Europese normen verwerkt. De meeste andere potten die in Europa verkocht worden komen uit landen zoals Vietnam, de Phillipijnen, Maleisia, India en China. Wordt daar op dezelfde manier gewerkt?

Milieu belasting

Gemaakt in het Verenigd Koninkrijk, lichtgewicht, beperkte transport afstand betekent minder milieu belasting dan het zware keramiek en metaal dat geïmporteerd wordt. De energie die wordt gebruikt om te produceren is ook minimaal.

Hergebruik

Ten eerste, alle glasvezelpotten kunnen naar ons geretourneerd worden voor reparatie of opnieuw verven zodat ze weer als nieuw gebruikt kunnen worden. De enige reden om ze weg te gooien is als het model niet meer actueel zou zijn. Als dit mocht gebeuren, dan zijn de potten tegenwoordig volledig recycle baar. De glasvezels kunnen onttrokken worden van het afval en worden hergebruikt in isolatie producten. De restproducten worden afgebroken en hergebruikt als basis voor het aanleggen van autowegen en ook voor dakbedekking.

Het is het vermelden waard, dat veel van de glasvezel matten die voor de potten gebruikt worden als gemaakt zijn van gerecycled glas!

spirit

Express yourself with this unbeatable range of top quality but price competitive planters that are designed to complement each other. Each collection features trademark Spirit styling cues – curved corners, the same angle of taper and wide feature lips. Mix and match across the range and free your design Spirit.

Exprimez-vous avec cette gamme imbattable de bacs de bonne qualité à des prix compétitifs qui sont conçus pour se compléter. Chaque collection de la marque, Spirit, possède les détails conforme à cette gamme – angles arrondis, même angle pour les bacs évasés et les bords larges.

Onderscheidende collectie van complementaire potten. Kwaliteit voor een scherpe prijs.

Elke collectie heeft de Spirit stijl, dat zich vertaalt in dezelfde hoek, dezelfde rand zodat u van alles en nog wat kunt combineren.

Quadik Plus 01 with self-coloured Hot Lip insert

quadik plus hot lip inserts

Introducing a new concept for planting convenience and style. The Quadik Plus Hot Lip inserts make planting up simplicity itself. Assemble the Tanker irrigation, drop in and surround with compost – then plant as normal. The liners can be planted off site and simply dropped into each planter in the building to make a fantastic display that can be installed by a single technician without the need for full high top van transport. Better still, the Hot Lip feature means you can specify a different colour lip from the planter body and choose from flat or curved lips. Personalise each building floor with different colours, match interior decor combinations or reflect company logos – the possibilities are endless as you can specify Hot Lip in any RAL colour or any of our unique finishes. Hot Lip inserts are fantastic too for flowering plant changes – letting you plant up your replacements off site and simply swapping the inserts over on site with no mess and minimum time wasted.

Présentant un nouveau concept pour planter avec efficacité et style. Le 'Quadik Plus - Hotlips' fait de la plantation la simplicité elle-même. Assemblez et placez la réserve d'eau, 'Tanker', dans le bac et ajouter le terreau, terminez la plantation. Les bacs de plantation peuvent être préparés à l'avance et simplement posés dans chaque bac sur place. 'Hot lips' est disponible en toutes les couleurs RAL ou en finition 'Naturel', en version plate ou bombée. Il peut être assorti ou pas avec le bac. Personnalisez chaque étage d'un immeuble en différentes couleurs, créez des bacs avec le logo d'une entreprise ou assortissez avec une décoration intérieure.

Een nieuw concept met gemak en stijl. Met de Quadik Plus Hotlips inzethoes wordt beplanten wel heel eenvoudig. Met het Tankersysteem, de inzethoes en de potgrond en klaar.

De inzethoes kunnen vooraf beplant worden en terplekke in de potten gezet worden en U heeft een fantastisch display. Gemakkelijk door één persoon uit te voeren en geen hoge bestelbus of vrachtwagen nodig. Nog beter, u kunt de rand in een andere kleur kiezen en dan met gewone of gebogen lip. Zo kunt u maatwerk leveren met de kleuren van het bedrijf, of elke verdieping een ander kleur thema. Eindeloze variatie.

Ook uitermate geschikt voor kleur thema's met bloeiende planten. Op uw bedrijf opplanten en de inzethoes gewoon wisselen, arbeidsbesparing ten voeten uit!!

Hot Lips Colours + Finishes

ceramic style

Taking the advantages of Advanced Composites to the maximum. This extensive collection features the handmade look, feel and texture of real ceramics and terracotta planters, but with none of the disadvantages. Lightweight, waterproof, frostproof, UV stable, almost unbreakable and available in any colour or finish; now you can specify ceramics anywhere.

Cette collection propose une large palette de contenants présentant l'aspect de la céramique et de la terre cuite. Léger, imperméable, ne craint ni le gel ni les UV, disponibles dans toutes les couleurs et finitions.

Maximaal voordeel. Een uitgebreide collectie die eruit ziet en voelt als het echte keramiek of terracotta. Uw voordeel; lichtgewicht, waterproof, vorstbestendig, UV ongevoelig, bijna onbreekbaar en elke kleur of afwerking die u maar wenst. Nu kunt u overal "keramiek" neerzetten.

A large, textured ceramic vase with a prominent honeycomb or hexagonal pattern. The vase is filled with a variety of green plants, including succulents and small yellow flowers. The lighting is warm and golden, highlighting the intricate details of the ceramic and the vibrant colors of the flora.

ceramic style

hex

A strong statement for feature planting. Polished finishes take full advantage of the reflective patterning.

Un design affirmé pour des plantations exceptionnelles. Les finitions polies mettent en valeur le motif réfléchissant.

Bodacia - roof terrace, Paris

geo design

A superb selection of architectural planters in strong geometric shapes. All feature clean angles and other sizes can easily be built to order. Like the Spirit range, Geo planters all complement each other and can be used in combination across the range for a cohesive scheme.

Un choix superbe de contenants architecturaux avec des formes géométriques aux angles nets. La gamme Geo est parfaitement complémentaire et modulable.

Een architectonische design pot in geometrische vormen. Een eindeloos spel met het combineren van de bij elkaar passende maten.

geo design

triangle + diamond

Equilateral tall triangles can be interlocked in different sizes and colours to create features limited only by the imagination. Diamonds are eye-catching space dividers and troughs.

Les grands triangles équilatéraux peuvent s'assembler en différentes tailles et couleurs pour créer des compositions illimitées. Les Geo Diamants sont des jardinières attirantes et originales.

De gelijkzijdige driehoeken kunnen in diverse vormen en maten gekoppeld worden. Een lust voor het oog. Geo Diamonds zijn om de ruimte te verdelen en als bakken, echte blikvangers.

Barrier's versatility makes it ideal for exterior usage - Bespoke size in Aged Lead, Paris

garden classics

Despite the name, like all Livingreen Design, Garden Classics can be used as both garden and interior planters. However, these ranges have a distinct exterior flavour with design influences from throughout the world.

En dépit du nom, comme toutes la collection Living Green Designs, les classiques de jardin peuvent être employés en extérieur et en intérieur.

Ondanks de naam, kunnen zoals alle Livingreen Design potten, ook deze zowel in de tuin alsook binnen gebruikt worden. Een ontwerp met invloeden van buitenaf.

tree planters

the largest off-the-shelf range available

Livinggreen Design offers the largest and most varied selection of off the shelf tree planters available anywhere. We classify a tree planter as at least 90 x 90cm and capable of taking at least a 3m specimen. All are suitable for both interior and exterior use in the most demanding of environments. Such is our skill with tree planter design and fabrication we were chosen to create special planters for the James Bond film, Casino Royale.

Livinggreen Design offre le plus grand stock et le plus divers choix des bacs à arbres. Ces grands bacs à partir de 90 x 90cm peuvent supporter un arbre d'au moins 3m. Tous conviennent pour l'usage à l'intérieur et à l'extérieur. La qualité de ces modèles nous a permis de réaliser des bacs spéciaux pour le film de James Bond, Casino Royale.

Livinggreen Design biedt de grootste selectie potten geschikt voor grote bomen, bijna uit voorraad leverbaar. Vanaf 90x90cm voor binnen en buiten. Deze potten zijn speciaal ontworpen en gemaakt voor de James Bond film, Casino Royale.

replica rocks

create rock features anywhere

Created for the TV and film industry, these AC rocks and standing stones are so realistic as to be indistinguishable from the real thing – except for the weight. Ideal for any location where crane access is an issue – atriums, courtyards, roundabouts etc.

Crées pour la TV et l'industrie cinématographique, ces rochers en AC sont si réalistes qu'ils ne peuvent être distingués du vrai du faux - excepté le poids. Idéal pour tout endroit où l'accès d'une grue est problématique - les atriums, les cours, les ronds points etc.

Speciaal gemaakt voor TV en film, deze glasvezel rotsen en stenen zijn niet van echt te onderscheiden – behalve het gewicht. Ideaal voor iedere locatie. U heeft geen kraan meer nodig.

Standing Stones

Standing stones (pic) – Ideal feature rocks, No2 is particularly suitable for supply as a water feature – please ask for details.

Les pierres debout

Idéales en composition, le No2 est particulièrement appropriée pour l'ajout d'une cascade - demandez les détails.

Stenen

Stenen (foto) ideaal als sculptuur. Nr.2 is uitermate geschikt voor in een fontein.

Metpost base

All standing stones and rocks can be supplied with a bonded on Metpost base which can be concreted into the ground if required.

Fixation - Pique en métal

Toutes les pierres et les rochers peuvent être fournis avec une pique en métal fixée sous la base qui peut être scellée au sol ou planté si nécessaire.

Pique en métal

Alle rotsen en stenen kunnen geleverd worden met vastgeklonken grondpinnen. Het kan zo in het beton.

Colours + Finishes

All standing stones and rocks can be specified in either plain colours or with iron (rust) and/or copper seaming.

Standard finishes are as follows:

Plain: Mudstone (brown), Sandstone, Slate grey, Coal grey

Seamed: Slate base with iron seam

Slate base with iron and copper seam

Other rock finishes to special customer order.

bespoke design

any size, any shape any finish

Livinggreen Design offer a full bespoke design and build service to specifiers. With professional product designers on our team, we can take a sketched idea and using our CAD facility provide you with drawings and 3D models for approval prior to manufacture in Advanced Composites, metals, wood or any combination of these as required. Any size and finish can be supplied, with AC particularly suitable for roof gardens or anywhere where weight is an issue. Lighting can easily be incorporated if required as can logos and memorable dates (see page 165).

Livinggreen Design offre un service complet de design sur mesure ainsi que des conseils aux prescripteurs. Avec les designers professionnels dans notre équipe, nous pouvons élaborer un croquis et vous fournir des schémas et des modèles 3D pour approbation avant leur fabrication. Ce service est disponible pour les AC, les métaux et le bois. Toutes les tailles et les finitions peuvent être assurées, avec des bacs en fibre de verre convenant particulièrement pour les toitures jardins et terrasses. L'éclairage peut facilement y être incorporé, de même pour les logos et des dates souvenirs (voir la page 165).

Livinggreen Design biedt u de mogelijkheid om een specifiek ontwerp of afmeting te realiseren. Met een professionele ontwerper in huis, kunnen we van uw schets, met de modernste technische hulpmiddelen, een professionele tekening en 3D-model maken. Na uw goedkeuring, kunnen wij het voor u maken. Of het nu in metaal, hout, glasvezel of een combinatie van deze is. In elke maat en afwerking, met of zonder logo, data of licht (zie pagina 165). Steek eens uw licht bij ons op.

bespoke metal

Working in stainless steel, aluminium and galvanised steel we can offer the facility to manufacture almost any size or shape of planter. Our price list provides a range of popular units including barriers, tapered squares and towers but almost anything is possible. These are all premium units, built to order out of the best quality material and welded for strength and durability. All can be GRP lined for watertightness and we offer powdercoating in any colour including satin silver and semi-reflective chrome.

Travaillant l'inox, l'aluminium et l'acier galvanisé nous pouvons fabriquer pratiquement n'importe quelle taille ou forme de bac. Nos listes de prix fournissent une gamme de bacs populaires comprenant des barrières, des cylindres et des colonnes, mais quasiment tout est possible. Ce sont les bacs d'excellente qualité, fabriqués sur commande avec le meilleur matériel et soudés durablement. Tout peut être doublé de GRP pour l'étanchéité et nous offrons des finitions de peinture en toutes les couleurs RAL, l'argent satiné et le chromé semi réfléchissant.

Ook van aluminium, roestvrijstaal of gegalvaniseerd staal kunnen wij maken wat u wenst. De meest gangbare maten staan in de prijslijst, zowel in zuilen alsook in taps lopende potten. Eerste klas materiaal, sterk en duurzaam. Waterdicht door middel van een speciale coating. Powdercoated in elke kleur, inclusief satin silver en semi reflecterend chroom.

tanker irrigation

The Tanker sub soil irrigation system is the natural choice for cost-effective watering of planters, planting beds and tree pits in both exterior and interior schemes. Incredibly simple to use, all Tanker systems consist of a tank or reservoir positioned under the rootball of the plants and linked to the surface by a flexible or rigid filler pipe. Water is then transported from the tank to the soil as required via a specially designed Geotextile wick which works with any reasonably good soil or compost. Depending upon the size of the area to be irrigated, the tanks can be linked together to form a network, replicating the Earth's natural water table and providing ideal conditions for root growth.

Fitting tanker water cell...

Simplicity itself

Fitting Tanker Modular network up to 4m long with full automation to restricted depth roof garden for fine turf

tanker irrigation

There are many proven advantages of using Tanker:

- **Less frequent watering:** independent research by the University of Reading has conclusively proved that plants in containers, hanging baskets or planting beds and irrigated using Tanker systems require watering only half as frequently as those planted without. Councils and landscapers have been able to slash maintenance labour budgets by using special Tanker hanging baskets, pillar and railings planters and also by retro fitting Tanker units to existing planters. For private gardens, home owners halve the burden of keeping their planters watered and can go on holiday in the summer with less worry about what they will find on their return.

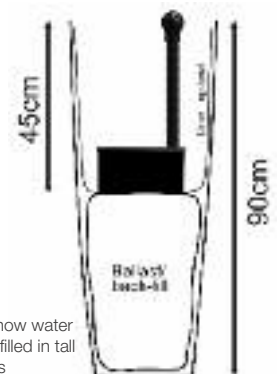

- **Water conservation:** As water is delivered straight to the rootball only as required by the plant, Tanker systems greatly reduce the amount of water required to irrigate any plant display. Even in a sealed system, such as a planter, the documented saving is at least 30% – for exterior beds, hanging baskets and drained planters, the savings will be much greater. With water restrictions a regular feature in many areas, this aspect of the system is becoming increasingly important to our customers.
- **Healthier, better looking plants:** Tanker only delivers water to the roots as needed, eliminating the flood/drought cycle experienced by manually watered plants. Soil moisture is optimised and the plant does not experience water stress. The result is a denser, larger rooting system and more compact, healthier growth above

ground. Councils using the system report that the displays produced using bedding plants are the best they have ever experienced with more and larger flowers and growth so vigorous that in some cases it had to be cut back – and all achieved with less than half the watering visits previously required.

- **Pays for itself in 3-6 months:** Depending upon the frequency of watering previously required, the labour saving alone will pay for these incredibly cost-effective units within 6 months. When you take into account that plants establish faster and are healthier long-term when watered using the system then other savings are guaranteed in plant replacement costs.

Typical Water Cell installation

Schematic of how water cell should be filled in tall planter designs

Various network options for Modular and Cylinder systems

There are Tanker systems to fit almost every possible situation.

WATER-CELL

- **Tanker Water Cell:** sealed reservoirs for irrigating individual planters. Available in sizes from 2l - 12l. Suitable for planters up to 90cm diameter.

Water Cell

Code	Litres	 
TWC2	2	220 x 60mm
TWC3	3	220 x 75mm
TWC4	4	220 x 113mm
TWC6	6	343 x 80mm
TWC8	8	343 x 100mm
TWC10	10	343 x 125mm
TWC12	12	343 x 150mm

MODULAR

- **Tanker Modular:** Available in both Solo (for individual planters) and Network (for larger planters and large beds). Modular units are just 5mm thick and 11cm wide making them ideal for trough planting, window boxes and containers where planting depth is limited. Modular Network is popular for planting beds where very large links can be constructed. Special units up to 4m long can be specified to irrigate lawns, bowling greens, golf greens etc.

Tanker Modular

Code	Litres	  
TMS1	0.75	125 x 120 x 55mm
TMS2	1.2	200 x 120 x 55mm

TCS20	20	2000 x 110mm

Network

TCN3	3	330 x 110mm
TCN6	6	660 x 110mm
TCN8	8	800 x 110mm
TCN9	9	900 x 110mm
TCN12	12	1300 x 110mm
TCN15	15	1500 x 110mm
TCN20	20	2000 x 110mm

- **Tanker Water Level Indicator:** For use in interior landscaping, the indicators are variable straight tubes fitted with a ball float and rod that provide an excellent indication of the depth of water at the base of any planter – perfect for Hydroculture and half-hydroculture growing systems. They are also useful in large sealed tree planters to indicate if there is excess water in the planter. Also available as a filler pipe with a removable lid and no indicator mechanism.

Water Level Indicator

WLI100	32mm	100mm

TANKER IRRIGATION

Each system can be specified with a number of accessories to fit different requirements.

- Filler pipes:** A no cost choice of flexible or rigid filler pipe is available on both Water Cell and Modular Tanker systems. The flexible pipe is supplied in lengths up to 50m and can be cut to any size (see page 158). As it can also be bent around corners, it is the perfect choice for larger tree planters, for most exterior applications and for unusual size planters. The flexible pipe can be fitted with a water level indicator which is manually cut to size. Rigid pipes are pre-fitted with a ball float indicator, can be purchased in 5cm incremental lengths and are simply pushed into the tanks for fitting, making this the best and simplest solution for the majority of interior planters. Tanker Cylinder can only be fitted with flexible pipe and cannot be fitted with a water level indicator – however levels can still be read using a Dip Stick (see page 158).

- Caps:** A choice of caps is available including Freeflow, Standard and Funnel. The Freeflow cap was designed specifically for use by interior landscapers. Open to the air for maximum soil aeration it is tamper proof and attaches securely to either the rigid or flexible pipe. The cap does not open and instead water is poured through a gate of specially shaped fins which are profiled to guide the water freely down the filler pipe without splash back from either bowser or watering can. The cap also features space to add a full colour bespoke advertising message – usually a company logo plus telephone number and web address. Freeflow caps also contain the water level indicator rod which is viewed through the fins and must be used with both rigid and flexible filler pipe where a water level indicator mechanism is fitted. Standard caps are the usual choice for exterior use or where a water level indicator is not required. The cap simply pushes over the end of the filler pipe making a very discrete closure. The Funnel is essentially an open version of the Freeflow cap and is fitted as standard to hanging baskets and pillar planters. A cover cap is available for the funnel making it a suitable alternative to the standard cap.

tanker irrigation

- Wick:** Tanker Wick are geotextile strips fitted to every Tank and are the heart of the system. As they are manufactured from a special combination of woven plastics, they will never deteriorate when left undisturbed. However where frequent replanting of planters is necessary, for example, hanging baskets and containers planted with bedding plants, it may become necessary to replace the wicks after a number of years. This can easily be carried out for all the Water Cell systems and wicks are supplied for each unit size pre-cut to length. Modular systems, due to their design, are much less likely to require new wicks but if eventually this does become necessary then the units can be returned to us for refurbishment.
- Dip Sticks:** Tanker Dip sticks are flexible capillary rods that can be put down the filler tube and pulled out to show the exact depth of water in that tank or planter. For use where water level indicators cannot be used and particularly suitable for large tree planters. Custom sizes available.
- Floats:** Polystyrene floats suitable for use with the flexible filler pipe only. Cut to size. Supplied FOC with new flexible filler pipe installations where requested.
- Stoppers:** These are used to seal the ends of Network units at the end of a run or to convert a network unit into a Solo tank. Supplied FOC with every new Network installation.
- Flexible pipe:** Available in up to 50m lengths, this is both the connecting pipe between Network Tanks and also an optional filler tube instead of the rigid pipe system. Appropriate lengths are supplied FOC with new Solo and Network systems where required.

tanker – research proven

“ In summary, planters containing Tanker systems will save you half your costs of watering while providing a more attractive, healthier plant with a much stronger and better developed root system.”

Tanker was invented some 25 years ago and at least two installations from that period survive and are still functioning perfectly today. However, to further prove the effectiveness of the system, and in particular its potential to dramatically cut the costs of watering seasonal exterior displays, Tanker has recently been the subject of intensive research at the world renowned University of Reading Horticultural Technology Unit.

The trials were carried out on typically planted interior office plant displays and also on contractor style hanging baskets, window boxes and exterior planters. In every case identical control units were set up without Tanker being fitted. All the units were watered whenever the soil moisture content fell below a predetermined point as measured by use of a Theta probe. The exterior planters were assessed for 70 days and the interior for 5 months before a destructive analysis was carried out to look at the root systems and the fresh weights of the plant material in each. The results are shown in the panel opposite and conclusively prove that fitting Tankers will both save money on maintenance and improve plant quality.

Above: Interior planter clearly showing superior plant development in Tanker (bottom) fitted planters after 70 days of trials.

Top: Roots systems: left – without Tanker; right– with Tanker
Bottom: Tanker fitted window boxes - Day 56

Proof Positive

A summary of results of trials conducted at the University of Reading summer 2004 on hanging baskets, window boxes, patio planters & interior displays.

- *The use of Tanker systems in all situations tested halved the number of watering visits required to maintain the plants.*
- *The amount of moisture in the soil was always more controlled with Tanker systems present – they were less likely to be either very wet or very dry – promoting better plant development.*
- *The plants in the Tanker watered units looked visually more pleasing than those in the control units having a better, more compact growth pattern.*
- *The root systems of the Tanker grown plants were far better developed than those that were top watered only. In exterior trials, the roots reached the bottom of the planters and formed dense masses while also being thicker and fleshier.*
- *Interior trials using Tanker or top watering alone proved that Tanker watered units required at least 30% less water and still produced a better display.*

top dressings + sundries

Sundries

The perfect finishing touch to a containerised planting display is a great decorative dressing to cover-up bare compost. Far from just looking good, this will also help to slow water loss through evaporation and prevent problems like scarid fly breeding in the compost.

Our range of dressings have been specially selected to be beautiful, but also of a size that is easy to work with and to provide a selection of different colour options to complement your choice of planter finish.

Le surfaçage est la touche finale sur une composition. Non seulement esthétique mais aussi écologique, l'eau d'arrosage s'évapore moins vite.

Un grand choix d'éléments de surfaçage esthétique et pratique.

De perfecte afwerking voor een plant in pot combinatie is een decoratieve selectie van stenen om de kale grond te bedekken. Niet alleen ziet het er goed uit, maar ook wordt het water verlies door verdamping vertraagd en wordt voorkomen dat ongedierte zich nestelt in de potgrond.

Een selectie prachtige stenen, van een afmeting waar u mee kan werken, beschikbaar in diverse kleuren, dus complementair aan de pot.

Compost & Leca

Horticultural grade washed leca granules in 2 sizes, ideal for top dressing, drainage, half or full hydro use. Not be confused with industrial grade unwashed Leca which is totally unsuitable for use in planters.

Our own formulation of peat based planter compost using only sphagnum peats rather than the finer and poorer quality sedge peats. Contains a small amount of fertiliser as containerised plants need very careful feeding using a formulation such as specially developed liquid planter fertiliser.

Terreaux et Billes d'argile

Gamme horticole de billes d'argile en 2 tailles, idéal comme surfaçage, drainage ou en hydroculture.

Potgrond & hydrokorrels

Gewassen hydrokorrels in twee maten, ideaal als bedekker, drainage en voor half of compleet hydro gebruik. Niet te verwarren met de industriële, ongewassen granulaten, totaal niet geschikt voor plant en pot.

colours + finishes

Most Livinggreen planters are available in all the finishes detailed – but check the product page for a full listing as the design of some units makes certain finishes impractical.

La plupart des contenants de 'Livinggreen' sont disponibles avec toutes les finitions détaillées ci-dessous. Veuillez toutefois vérifier la compatibilité du choix de la finition avec la forme du bac, car certaines sont difficiles à obtenir selon les modèles choisis.

De meeste Livinggreen Design potten zijn beschikbaar in alle kleuren en afwerkingen zoals hieronder aan gegeven – maar check de product pagina, want voor sommige ontwerpen zijn bepaalde afwerkingen technisch onmogelijk.

Please note we recommend Textured and Natural finishes if planters are to be used outdoors. However all our finishes are suitable for exterior use – please specify this at the time of ordering.

Nous recommandons pour des usages extérieurs d'employer des finitions texturées ou naturelles. Cependant toutes nos finitions conviennent pour l'usage à l'extérieur – spécifiez le lieu d'usage (intérieur ou extérieur) sur la commande.

Voor buiten gebruik adviseren wij U de Structuur of Naturel afwerking. Echter al onze kleuren en afwerkingen zijn geschikt.

BS4800 and RAL Classic: Over 300 colours available in highly polished gloss, satin sheen or textured matt finishes so you can achieve a perfect match to other furnishings.

BS4800 et RAL Classique: Plus de 300 couleurs disponibles avec plusieurs finitions : polie, satin ou mate texturée. Ainsi nos contenants permettent de trouver l'accord parfait avec l'esprit et l'aménagement du lieu.

BS4800 en RAL klassiek: Meer dan 300 kleuren beschikbaar van hoogglans tot structuur mat. Voor een perfecte match met het interieur.

Standard Colours: Specially selected colours from the ranges above that are usually held in stock and will meet most requirements. Available in highly polished gloss, satin sheen and textured matt.

Couleurs standard: Certaines couleurs sélectionnées parmi les gammes citées sont habituellement en stock et répondent à la plupart des exigences. Il s'agit des finitions suivantes : polie, satin et mate texturée.

Standaard Kleuren: Speciaal geselecteerde kleuren uit de range hierboven. Deze zijn op voorraad dus snel leverbaar.

Polished Metallics: The closest finishes to polished metal. *Also available in satin sheen.*

Métalliques polies: Finitions les plus semblant au métal poli.

Gepolijst Metallic: De afwerking die het beste gepolijst metaal benadert. *Ook beschikbaar in Satijnglans.*

Textured Metallics: Matt metal finishes with a rippled effect.

Métalliques texturées: Finitions en effet métal mat texturé.

Structuur metallic: Een mat metalen afwerking met rimpel effect.

Polished Pearlescents: Deep, almost 3D colours.

Perle polies: Finition créant un effet de profondeur.

Gepolijst Parelmoer: Diepe, bijna 3D kleuren.

Polished Stardust: Vibrant colour with a hint of silver sparkle. *Other colours on request – check availability before ordering.*

Stardust polies: Couleur scintillante incrustée de petites paillettes argentées. *Plusieurs couleurs sur demande - vérifiez la disponibilité.*

Gepolijst Stardust: Vibrerende kleur, met een zilveren schittering. *Andere kleuren op aanvraag.*

Natural: Unique finishes that exactly mimic natural materials. *Please note all these finishes have not only the look but also behave like the real material, weathering naturally if outdoors. However, the surfaces will mark clothes if brushed against so use indoors only in low footfall areas. Rust can be matt lacquered to avoid this problem on request.*

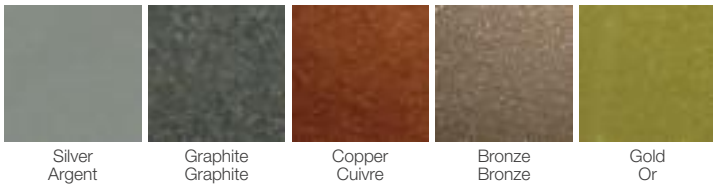

Naturel: Finitions uniques qui imitent exactement les vrais matériaux naturels. *De plus elles les ressemblent en aspect et en comportement. Par exemple les finitions rouille et cuivre bleu vieillissent naturellement en usage extérieur. Attention, ces surfaces pourront marquer les vêtements, il est recommandé pour leur usage en intérieur de ne pas les disposer à proximité des endroits passants. La rouille peut être mate laquée à la demande pour éviter cet inconvénient.*

Naturel: Unieke afwerkingen, voor de natuurlijke uitstraling. *Niet alleen de kleur is levensecht maar ook het materiaal. Bij gebruik buiten, verweert het ook echt. De zgn Roest afwerking, geeft ook echt roest af. Om dit te voorkomen kan de pot gecoat worden.*

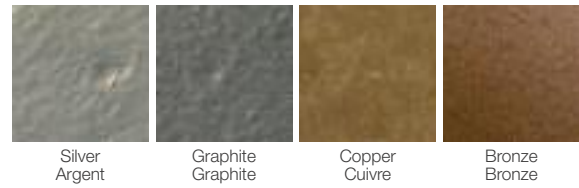

Standard Colours - Couleurs standard - Standaard Kleuren

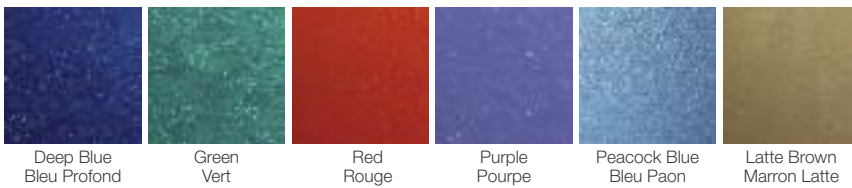

Polished Metallics - Métalliques polies - Gepolijst Metallic

Textured Metallics - Métalliques texturées - Structuur metallic

Polished Pearlescents - Perlé polies - Gepolijst Parelmoer

Polished Stardust - Stardust polies - Gepolijst Stardust

Natural - Naturel - Naturel

planter options

Moulded names, initials and dates

Where our planters feature wide, flat surfaces we are able to add lettering and dates in moulded relief that is integral to the planter in the same finish and will last without deterioration for many, many years, even outdoors. Examples may include the name of a hotel or business, the initials of a couple getting married and the date, the date a company was established etc. Prices are per letter or number and dependent upon the finish required.

Full colour logos or other designs

On planters that feature a suitable smooth, flat surface we are able to offer a very cost-effective option to add full colour logos or other designs. Only suitable for interior use, this is achieved by printing the design on acetate and programming a robotic cutter to remove all the excess acetate leaving only the design or logo, which is then easily adhered to the planter. Extremely effective, the result is highly professional but at a low cost following a one off set up charge for each design.

Lighting

Most planters can be specified to include lighting options for both interior and exterior use. Please see our Bespoke Design section for some examples and contact us to discuss your requirements.

Castor bases

All our planters can be specified to include a fully bonded in castor base, with or without brakes as required. The base will be recessed into the planter so the wheels will not be noticeable. Each castor base is engineered for the individual planter and the likely weight loading. Please note, castor bases are intended for occasional, not daily use and may fail if bumped regularly over carpet joining strips, kerbs and other obstructions.

Pallet bases

All our tree planters can be specified with a hidden pallet base for ease of moving once planted. Each base is engineered for the style, size and weight loading of individual units and will incorporate strengthening materials to suit. Please note, pallet bases are intended for occasional use only.

False bases

Each of our taller, thin planters, typically those over 60cm, can be specified with an integral false base, at any height, but usually at 40 – 45cm down from the lip, to create the perfect sized planting pocket. Suitable for use with soil plants they can also be specified to be fully waterproofed to the top and at a height suitable for hydroculture planting. Weights can also be added to the floor base where stability is an issue – please specify your requirements at the time of ordering.

Noms, initiales et dates façonnés

Les surfaces plates et larges de nos bacs nous permettent de rajouter les lettres et les dates façonnées en relief sur le bac et dans la même finition. Les exemples peuvent être le nom d'un hôtel ou d'une entreprise, les initiales d'un couple marié avec la date de leur mariage, la date de création d'une société...

Les prix sont calculés par lettre ou chiffre et le type de finition spécifiée.

Logos polychromes ou images

Sur les bacs qui comportent une surface lisse et plate nous pouvons offrir une option très économique pour ajouter des logos polychromes ou autres images. Exclusivement pour l'usage à l'intérieur, ceux-ci sont réalisés par l'impression de l'image sur de l'acétate qui est ensuite découpé au laser, elle est ensuite facilement collée sur un contenant. Extrêmement efficace, le résultat est professionnel, après les frais initiaux de mise en page de l'image, les coûts sont moindres.

Éclairage

La plupart des contenants peuvent être adaptés avec une forme d'éclairage pour l'intérieur ou l'extérieur. Consultez notre rubrique 'Design sur mesure' et contactez-nous afin de discuter de vos spécifications.

Bases de roulette

Tous nos contenants peuvent être équipés de roulettes avec un socle collé sous la base du bac, avec ou sans freins. La base et les roulettes ne seront pas apparentes. Chaque base de roulette est unique et adaptée à son bac, son chargement et son poids. Notez qu'elles sont prévues pour l'utilisation occasionnelle, et non quotidienne, elles peuvent se détériorer en les cognant régulièrement.

Palette cachée

Tous nos bacs à arbres peuvent être commandés avec un système de transpalette afin de faciliter leurs déplacements une fois plantés. Chaque transpalette est conçue et renforcée individuellement selon la charge du bac, sa taille et son poids.

Le système est prévu pour l'usage occasionnel seulement

Faux fonds

Tous les bacs à plus de 60cm d'hauteur peuvent être commandés avec un faux fond, habituellement à 40-45cm du bord. Adaptés aux plantations en terre, ils peuvent également être utilisés en hydroculture à la hauteur convenable et avec une couche d'étanchéité. Les grands bacs peuvent être lestés si nécessaires.

Namen, data, initialen

Op potten met gladde oppervlaktes, kunnen cijfers en letters "gesoldeerd" worden. Geïntegreerd op de pot gaat het vele jaren mee, zelfs bij gebruik buiten.

Of het nu gaat om een trouwdatum, initialen, naam van een hotel, er is veel mogelijk.

Prijzen op aanvraag.

Full Colour logo's /ontwerp

De potten zie een gladde, vlakke oppervlakte hebben, zijn ook zeer geschikt voor bedrijfslogo's of enig ander ontwerp. Alleen geschikt voor binnen. Het ontwerp wordt geprint op een plastic vel en met een robot gestuurde snijder wordt al het overbodige plastic weggesneden, waarna het ontwerp op de pot wordt bevestigd. Uitermate effectief, uitermate vriendelijk geprijsd.

Licht

De meeste potten van onze range kunnen voorzien worden van geïntegreerd licht. Voor zowel binnen als buiten. Kijk in de "Bespoke Design" sectie. Voorbeelden te over.

Wielen / wielplaten

Al onze potten kunnen geleverd worden met een geïntegreerde wielplaat. Met of zonder rem, verzonken zodat de wielen niet of nauwelijks zichtbaar zijn. Let wel, de wielplaat is niet geschikt om dagelijks heen en weer, over drempels en verhogingen te rijden.

Palletbodem

Al onze grote maten, kunnen gespecificeerd worden met een geïntegreerde palletbodem, makkelijk verrijdbaar. Elke bodem is speciaal ontworpen voor de stijl, afmeting en het gewicht van elke pot afzonderlijk.

Dubbele bodem

Elk van onze hoge potten, speciaal die van 60cm of hoger, kunnen gespecificeerd worden met een geïntegreerde extra bodem. Op elke hoogte, maar meestal op 40a45cm onder de rand. Voor de ideale plantdiepte. Ook kunt U een hoogte kiezen geschikt voor hydro beplanting, eventueel gespecificeerd als zijnde volledig waterproof tot aan de rand. Als stabiliteit van de pot een extra noodzaak is, kan eventueel gewicht onder in de pot aangebracht worden. Een pot op maat, gespecificeerd naar uw wensen.
